

good friend of Mrs. Lydia B. Pickard, who above all others loves her, and calls her "the Dear Friend of Women." Her correspondence is to call her, "The Friend of Women," and she is to be called "the Friend of Women," and is obliged to keep her secret, as her answer to the large correspondence she receives is a modicum of good and joy or solace from it. Her friends are very anxious about her, and the truth of this is known to all.

Her services, it is said, are demanded

for stamping, and various weak-works. It is a great blessing, however, works like a charm, and saves much trouble.

Indigestion. That festing of bowels, pain, weight and pain, always

exists, as well as all other maladies,

and in harmony with the law

of natural systems.

It costs six dollars for a dose, and

is paid by the doctor for the com-

pound.

The Maine Farmer: An Agricultural and Family Newspaper.

Maine Farmer.

Augusta, February 8, 1883.

TERMS OF THE MAINE FARMER.

\$10 in advance; or \$2.50 if not paid within three months of date of subscription.

All payments made by subscribers will be credited on the yellow slips attached to their papers. The price paid down in connection with a subscription will show the amount which he has paid, and will constitute, in all cases, a credit for sums paid by him.

A subscriber desiring to change his post office, or to discontinue his paper, must communicate to us the name of the office to which it has previously been addressed, so that we shall be unable to furnish from the lists.

Gravenstein—Gratuity. S. R. Sweetair.

Bullock Greening—Gratuity. W. R. White.

Committee—A. E. Andrews, W. H. Pearson, C. A. Dinsmore.

Mr. Abbotson gave his experience with old trees. When he took the farm the orchard was run down. He dressed and machined the trees, and then set about to take new life and bore bigger and better fruit. He would not plow an old orchard because it would injure the roots. He replaced his plow with a disc, which he found especially good for planting new ones in or near the same spot as the old.

Mr. Gilbert read a brief communication from Dr. N. T. True, giving his experience with an orchard, giving his preference to taking out an orchard. He advocates good care and liberal dressing; also advocates mulching and thinning; also主张着的树的根部，他将不会影响到新种植的树。

Mr. G. H. Ellis of Fairhaven, will call upon our subscribers in West Kennebunk during February.

The Experiment Station.

We publish below the bill reported to the legislature from the Agricultural Committee, to establish the Maine Fertilizer Control and Agricultural Experiment Station.

This is a measure which the FARMER has for many years advocated, and we are glad to know that there is reasonable prospect of its passage by the legislature:

An ACT establishing the Maine Fertilizer Control and Agricultural Experiment Station.

It is enacted by the Senate and House of Representatives in Legislature assembled, as follows:

SECTION 1. That for the purpose of protecting farmers, and in commercial and experimental, and from adulteration in seeds and feeds and for the purposes of promoting agriculture by scientific investigation and experiment the Maine Fertilizer Control and Agricultural Experiment Station is hereby established.

SECTION 2. The direction and management of this station shall be committed to five members, namely: the secretary of the board of agriculture, the president and professor of agriculture of the State College, the director of the experiment station, and two members to be appointed by the Governor, whose term of office shall be two years, except in the first appointment one shall be appointed for one year.

SECTION 3. The board of managers shall be called together by the secretary of the board of agriculture, at such place in the State as the board may determine, six weeks after the approval of this act, and shall organize by election of a president and secretary, who shall hold their offices for one year.

Meetings of the board of managers shall hold a meeting annually at Augusta, on the third Tuesday of January, for the election of officers, and the transaction of other business relating to the station. Other meetings may be called, on such dates and places as will best promote the objects of the station.

SECTION 4. The board of managers shall locate the station hereinafter provided for, and appoint a director who shall have charge of the management and control of the affairs of the station, and shall secure its removal to a suitable place.

Mr. Garrison gave his experience in buying grain and paying therefor at the lowest price. He also referred to two weeds, the wild carrot and the prairie sunflower, which have been brought here in grain and grass seeds, and which threaten to become serious pests.

That practically ended the meeting, and the practical gathering of members in Secretary Sawyer's room in the evening. Several subjects were briefly discussed, among others, the apple maggot, extracts being read from the "American Farmer" and the report of the Commissioner of Agriculture. Votes of thanks were passed to the Maine Central and other railways, to the porters, to the hotelkeepers, to the hotelmen, and to others from whom the Society had received favors. It was also decided that papers given to the press for publication prior to their being read, would not appear in the paper, and all correspondence with publishers would be reported to their papers only such abstracts of papers as they will be able to make up from hearing them.

The display of apples was very good, for a winter meeting, and a bad fruit season. There were 167 plates.

Notes.

The third volume of the Maine State Journal Herd Book is now in course of preparation for the press, and will soon be closed to entries. Persons having registerable animals but not registered, should at once attend to it. The advantage of having registered animals is so well understood and so obvious that it is not necessary for us to say a word further on the subject.

N. R. Pike, Wintrop, is the proper person to address.

RASING SEEDS.

Secretary Gilbert read a paper by Wm. Dumont of West Gloucester on vegetable and seed raising. He took detailed general view of our growing our vegetables and other seeds in this State; referred to the foul weeds that have been brought here in foreign seeds, and pointed out many seeds brought here and offered for sale.

Mr. Garrison gave his experience in buying grain and paying therefor at the lowest price. He also referred to two weeds, the wild carrot and the prairie sunflower, which have been brought here in grain and grass seeds, and which threaten to become serious pests.
